

Introduction

We at Meccanotecnica Riesi s.r.l are passionate about one thing: building high quality machine parts for a fraction of our competitors prices. While only a small, family owned and operated company, the parts that we produce here go on to do big things in all corners of the world. Some of our greatest achievements have included building specialized plates for the Large Hadron Collider in Switzerland, helping to make satellites for the Pierre Auger Observatory in Argentina, and even helping with research projects at prestigious universities like Massachusetts Institute of Technology. We have big ambitions for our future, and one day hope to be a certified supplier for the United States Defense Industry and even major aerospace companies, such as Lockheed Martin and Boeing. We carry twenty years of experience and are driven by passion and pride for our products. Every day we're gaining more recognition for the work we do, and we're excited to see what the future holds for us.
